

EDUCATION

The Chinese University of Hong Kong, Shenzhen · B.S. in Data Science and Big Data Technology

Sep 2023 - Jun 2027

Relevant coursework: Data Structures, Database Systems, Machine Learning, Software Engineering, Stochastic Simulation, Probability & Statistics. English-medium academic environment.

TECHNICAL SKILLS

LLM / Agent	LLM APIs, structured output, agent workflows, execution feedback, embedding retrieval, MCP tool wrappers
Engineering	Python, Flask, FastAPI, REST APIs, SQLite, SQL, Git; interface validation and automated testing
Data & ML	NumPy, Pandas, Scikit-learn; data cleaning, feature engineering, model evaluation and visualization

SELECTED AI PROJECTS

Feedback-Driven Automated Testing Agent · CSC4001 Course Project Extension

2026

Python · LLM API · Fuzzing · Metamorphic Testing · Evaluation

- Built an agent workflow connecting specification reading, test and metamorphic-relation generation, execution validation and feedback-driven follow-up testing, with model-call and command budgets.
- Constructed a local key-value-store model covering 28 command types and 20 manually seeded defects, with development and held-out evaluation splits.
- Implemented failing-test minimization, JSON / HTML reports, source hashing and offline replay; completed Luna API validation with 28 automated checks passing.

Intelligent Email Processing & Human Review System ↗ · MIS2001 Team Project

2026

Python · Flask · LLM API · Microsoft Graph · SQLite

- Built a customer-service email prototype for business relevance detection and fine-grained intent classification, combining reply templates, model outputs and confidence thresholds for routing.
- Integrated Microsoft Graph for email reading and replies, with human review, reply editing, non-business-email filtering, failure recording and retry states.
- Used SQLite to persist emails, replies and operation records, enabling status queries and audit tracing across classification, generation, approval and sending.

EXPERIENCE

ICBC Jiaxing Branch · FinTech Department Intern

Jul 2026 - Aug 2026

- Completed research on AI-assisted banking-branch transformation, covering policy retrieval, document preparation and workflow coordination scenarios.
- Designed a multi-agent concept for customer service, employee assistance and risk/compliance roles, including task orchestration, tool use and human confirmation.
- Produced a demonstration video and poster presenting the business scenarios, human-AI collaboration and source-traceability design.

COMPETITION

Mathematical Contest in Modeling / Interdisciplinary Contest in Modeling · Successful Participant

2026

Contributed to mathematical modeling, data analysis, parameter solving, visualization and an English technical paper under strict time constraints.
