

EDUCATION

The Chinese University of Hong Kong, Shenzhen · B.S. in Data Science and Big Data Technology

Sep 2023 - Jun 2027

Relevant coursework: Data Structures, Database Systems, Machine Learning, Optimization, Stochastic Processes, Probability & Statistics, Linear Algebra and Discrete Mathematics. English-medium academic environment with technical reading and writing experience.

TECHNICAL SKILLS

Applied AI	RAG / hybrid retrieval, tool calling, agent workflows, human-in-the-loop, evaluation, tracing / observability
Engineering	Python, FastAPI, REST APIs, SQLite, Git; reproducible demos, tests and API-layer implementation
Data & ML	NumPy, Pandas, Scikit-learn, LightGBM; data cleaning, feature engineering, model evaluation and time-series validation
AI Engineering Tools	OpenAI API, Claude Code and Antigravity; familiar with AI-assisted development workflows

SELECTED AI PROJECTS

Evidence Research Copilot ↗ · Independent Project

2026

RAG · BM25 · TF-IDF · Reciprocal Rank Fusion · Evaluation · FastAPI

- Built an evidence-grounded research assistant with BM25 and TF-IDF retrieval, fused through Reciprocal Rank Fusion.
- Exposed source chunks, ranking signals and citations so the retrieval evidence remains inspectable.
- Added reproducible Recall@K, MRR and citation-validity regression checks, plus a FastAPI/browser demo that runs without a paid model API.

Agent Workflow Studio ↗ · Independent Project

2026

AI Agents · Tool Calling · Approval Gates · Retry / Budget · SQLite Tracing · FastAPI

- Implemented a framework-light tool-using agent runtime with a planner, typed tool registry, execution budget and retry policy.
- Added risk classes and human approval gates before side-effect-class tools; arithmetic uses a restricted AST evaluator instead of unsafe eval.
- Persisted inputs, outputs, latency, errors and status to SQLite traces and surfaced them in a web timeline; tests cover approval pause/continue behavior.

Intelligent Email Auto-Reply System · Core Developer · Course / Team Project

2025

LLM Application · NLP · Confidence Routing · Human Review

- Designed an LLM-based customer-service email workflow for intent recognition, fine-grained classification and reply generation, with confidence-based routing between automation and human review.
- Implemented the model capability inside a runnable frontend/backend system, connecting model calls with business routing and a human fallback path.

COMPETITION

Mathematical Contest in Modeling / Interdisciplinary Contest in Modeling · Successful Participant

2026

Contributed to mathematical modeling, data analysis, parameter solving, visualization and an English technical paper under strict time constraints.
