github.com/shenyuwu100-netizen

EDUCATION

The Chinese University of Hong Kong, Shenzhen Sep 2023 - Jun 2027
B.S. in Data Science and Big Data Technology Shenzhen, China
Relevant coursework: Data Structures, Database Systems, Machine Learning, Optimization, Stochastic Processes, Probability & Statistics, Linear Algebra, Discrete Mathematics.
English-medium academic environment with experience in technical reading, literature search, presentations and technical writing.

TECHNICAL SKILLS

Programming	Python, C/C++, SQL
Data & Modeling	NumPy, Pandas, Scikit-learn, Matplotlib, LightGBM
Machine Learning	Linear regression, decision trees, clustering, data cleaning, feature engineering, model evaluation
Algorithms	Trees, graphs, hash tables, dynamic programming, search and sorting
Tools	Git, VS Code, Jupyter Notebook, LaTeX
AI Systems	OpenAI, Gemini and Qwen API integration; familiarity with Agent framework configuration and deployment

PROJECTS

Intelligent Email Auto-Reply System · Core Developer 2025
AI / NLP / LLM Application · github.com/shenyuwu100-netizen/Automatic-Email-Responder

- Designed an LLM-powered customer-service email workflow for intent recognition and business reply generation.
- Built a two-stage classification process that filters non-business messages, then performs fine-grained intent classification with confidence scoring.
- Implemented confidence-based routing so high-confidence messages can trigger automated replies while low-confidence cases move to human review.

Hull Tactical Market Prediction · Core Member 2025
Machine Learning / Time Series / Data Modeling

- Prepared financial time-series data through missing-value handling, feature engineering and time-series cross-validation splits.
- Trained and evaluated ElasticNet and LightGBM models to compare linear and tree-based approaches to financial time-series signals.
- Combined model predictions to improve stability and generalization.

Algorithms & Data Structures Practice · Independent Developer 2023 - 2026
Python / C++ / Algorithm Optimization · github.com/shenyuwu100-netizen/algorithm-lab

- Practiced algorithmic problem solving across dynamic programming, graph algorithms, search, sorting and advanced data structures.
- Focused on time/space complexity, edge cases, debugging and code refactoring in Python and C++.

COMPETITION

Mathematical Contest in Modeling / Interdisciplinary Contest in Modeling 2024
Successful Participant

- Contributed to mathematical modeling, data analysis, parameter solving, visualization and an English technical paper under strict time constraints.
